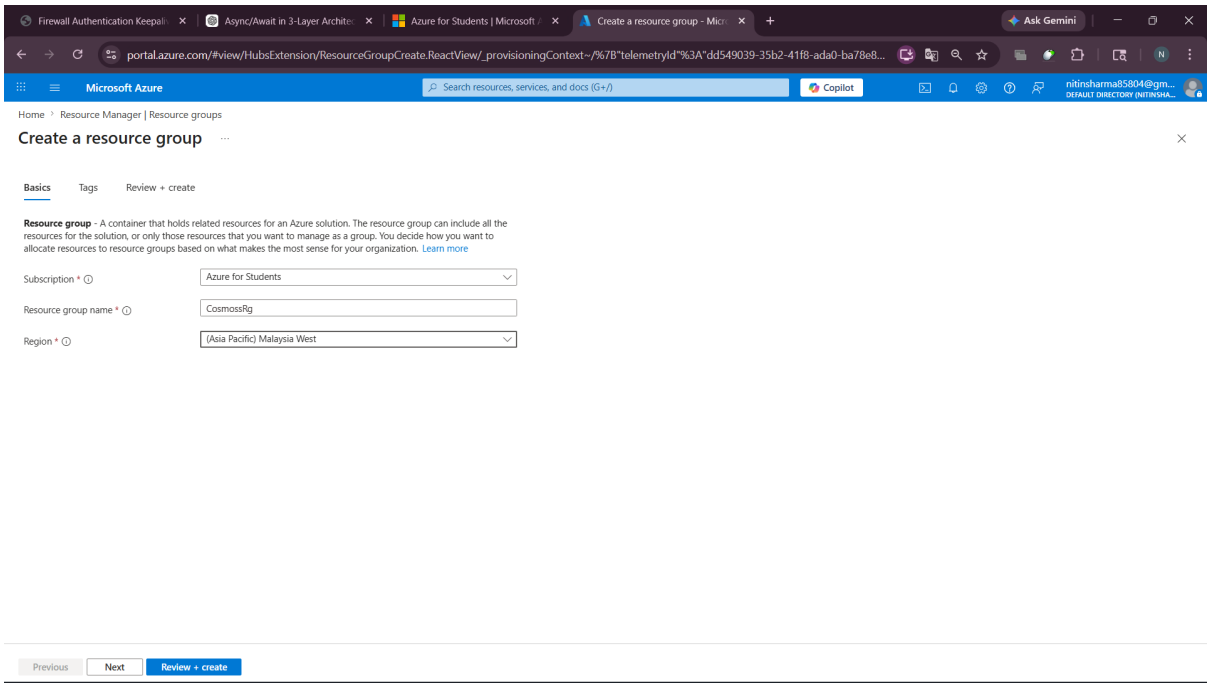
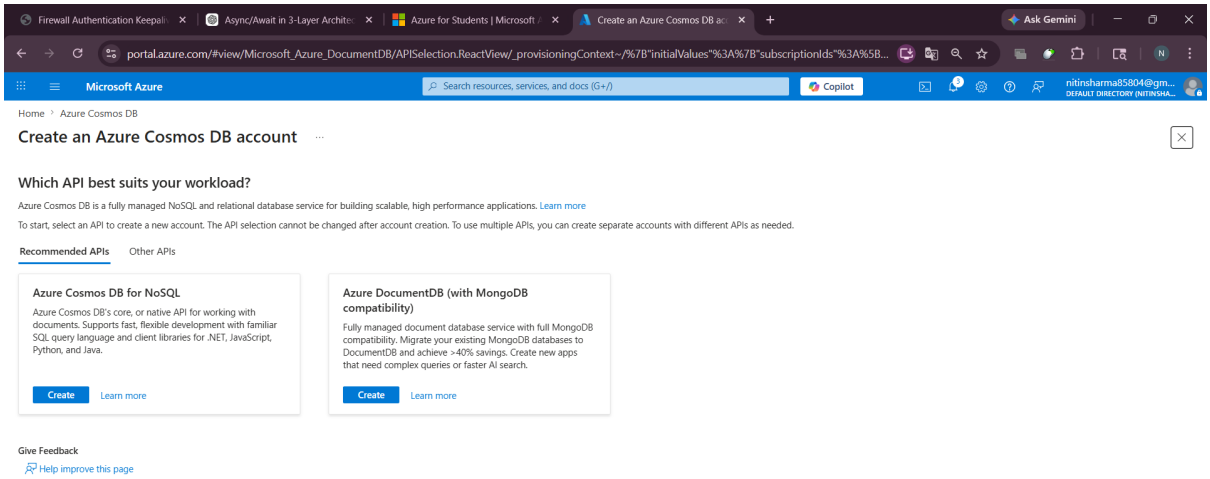
MongoDB on Azure

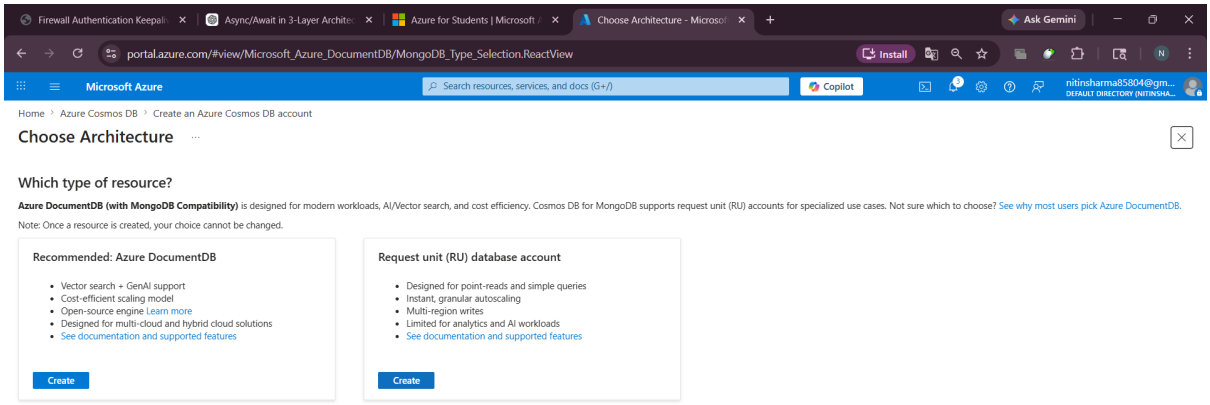
For that we Use CosmosDB



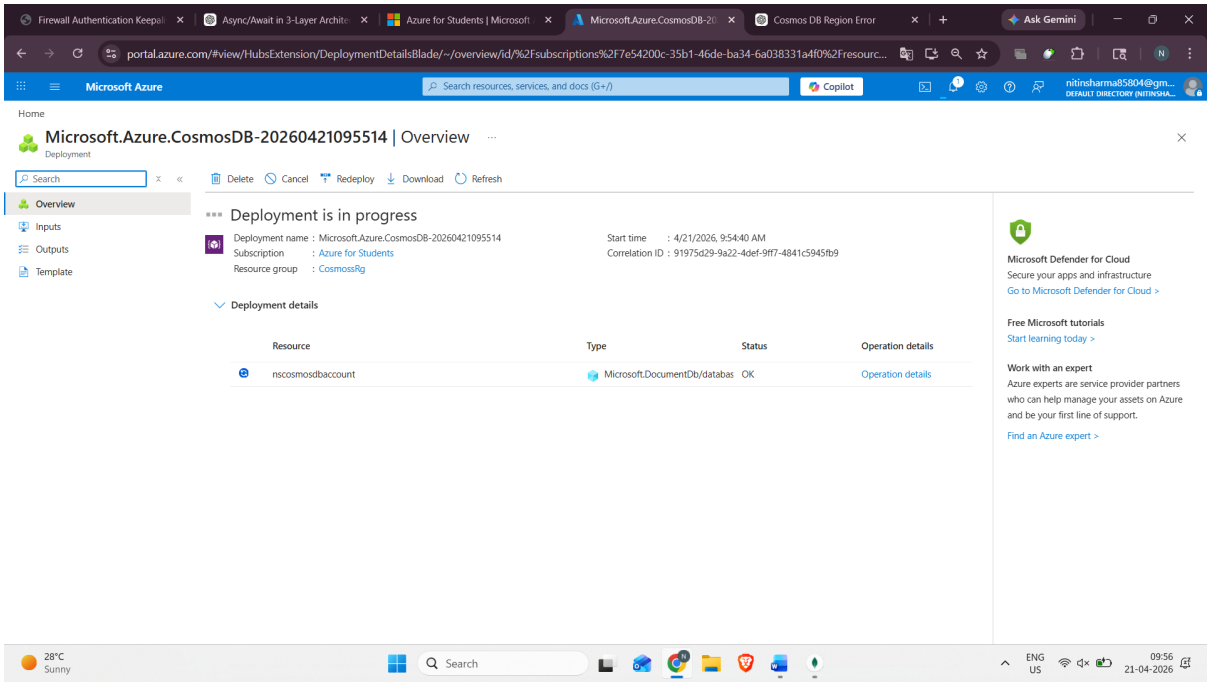
Create RG.



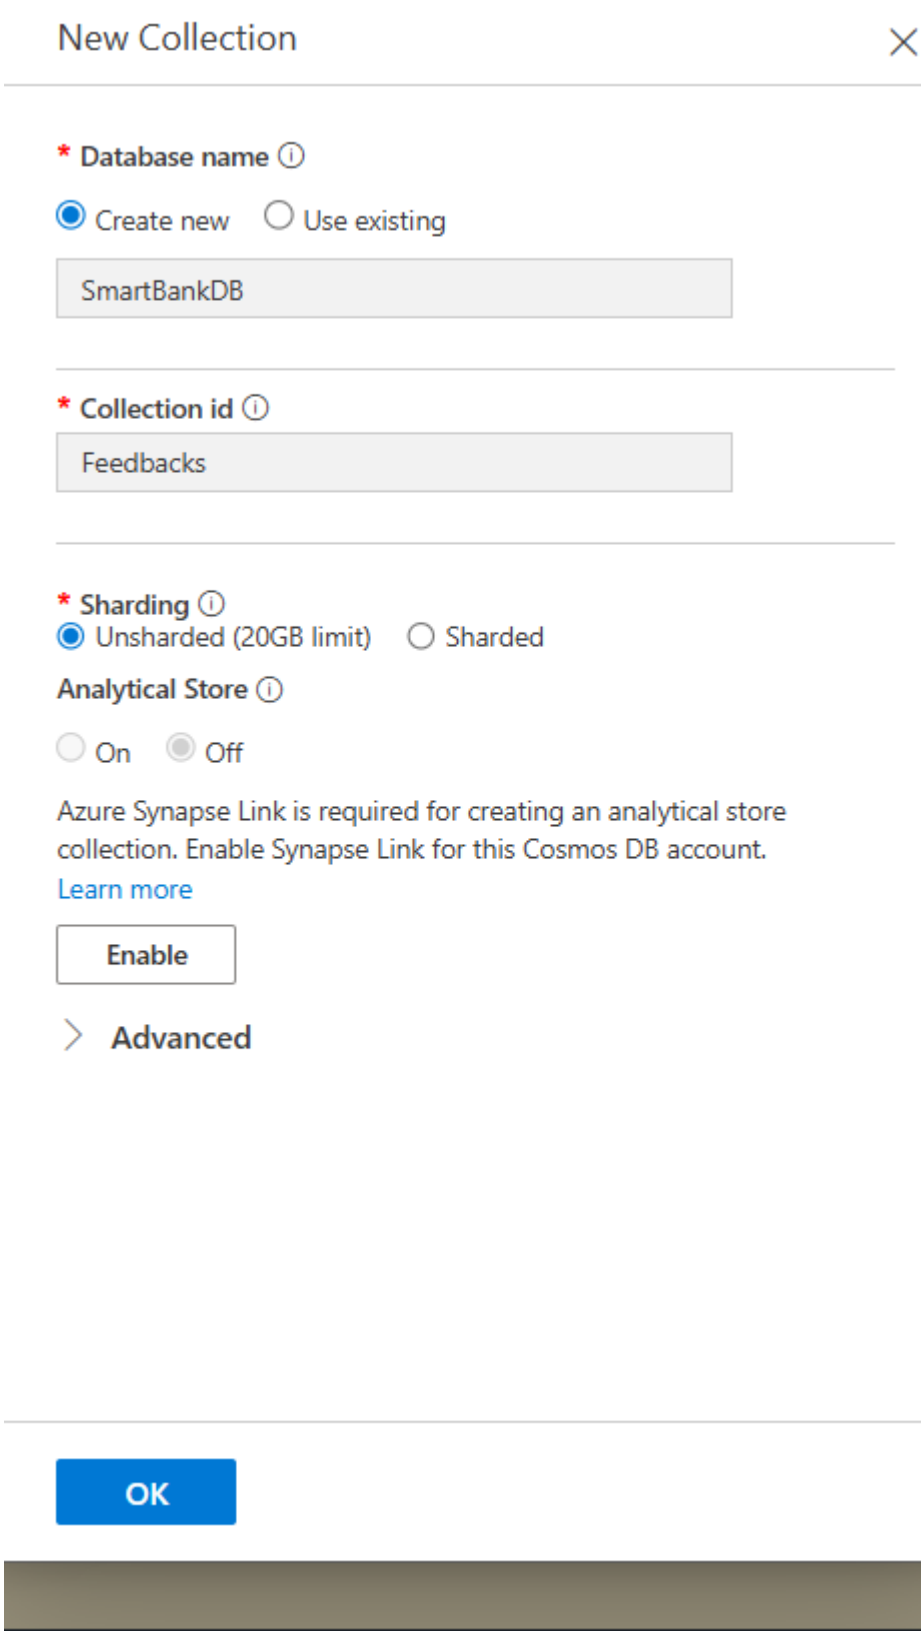
Now go to Cosmos DB/ Choose MongoDB



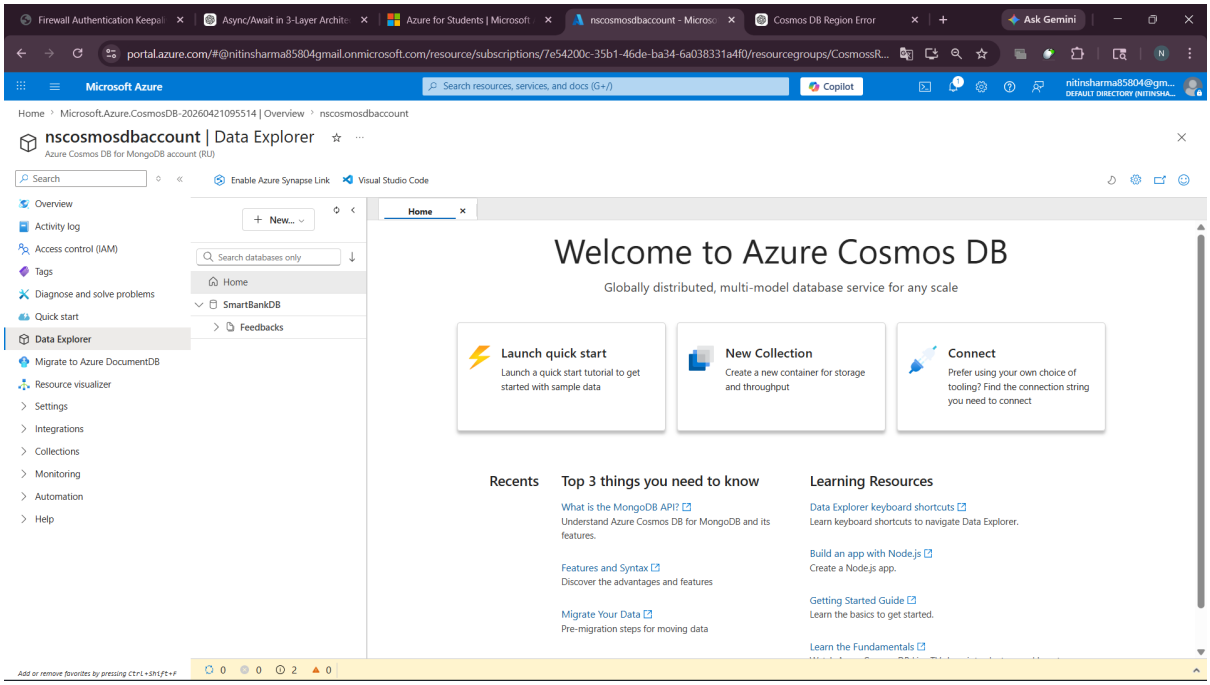
Click second option/ RU DB account



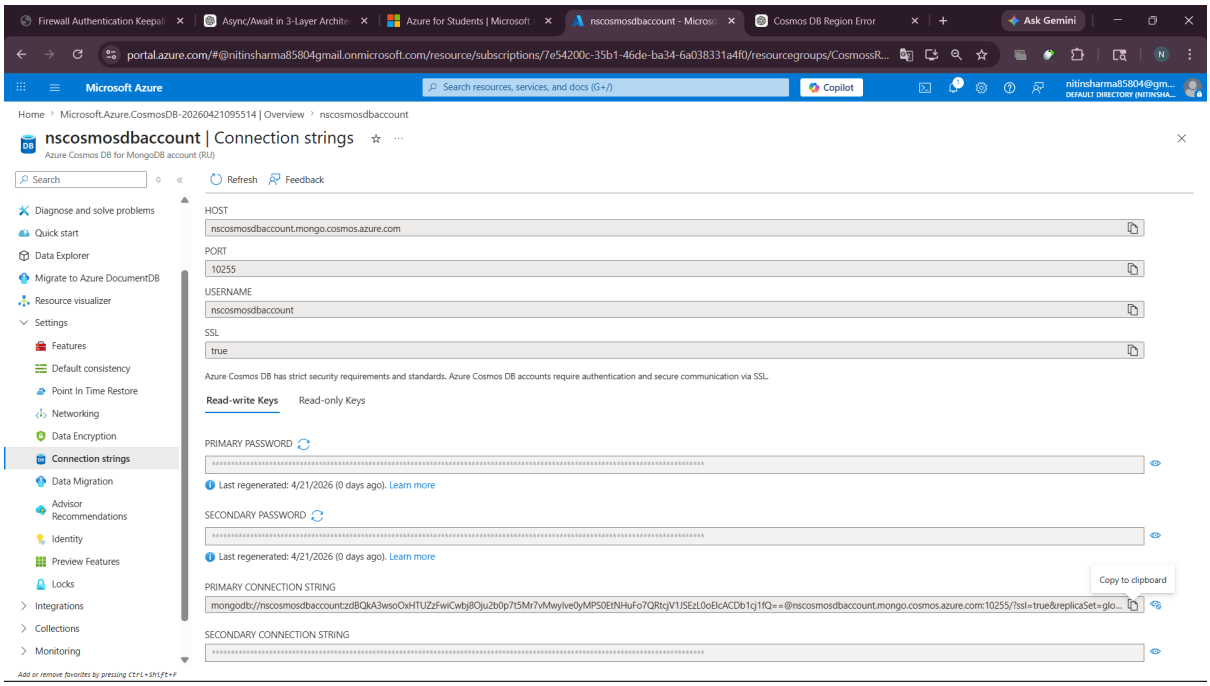
Deploy



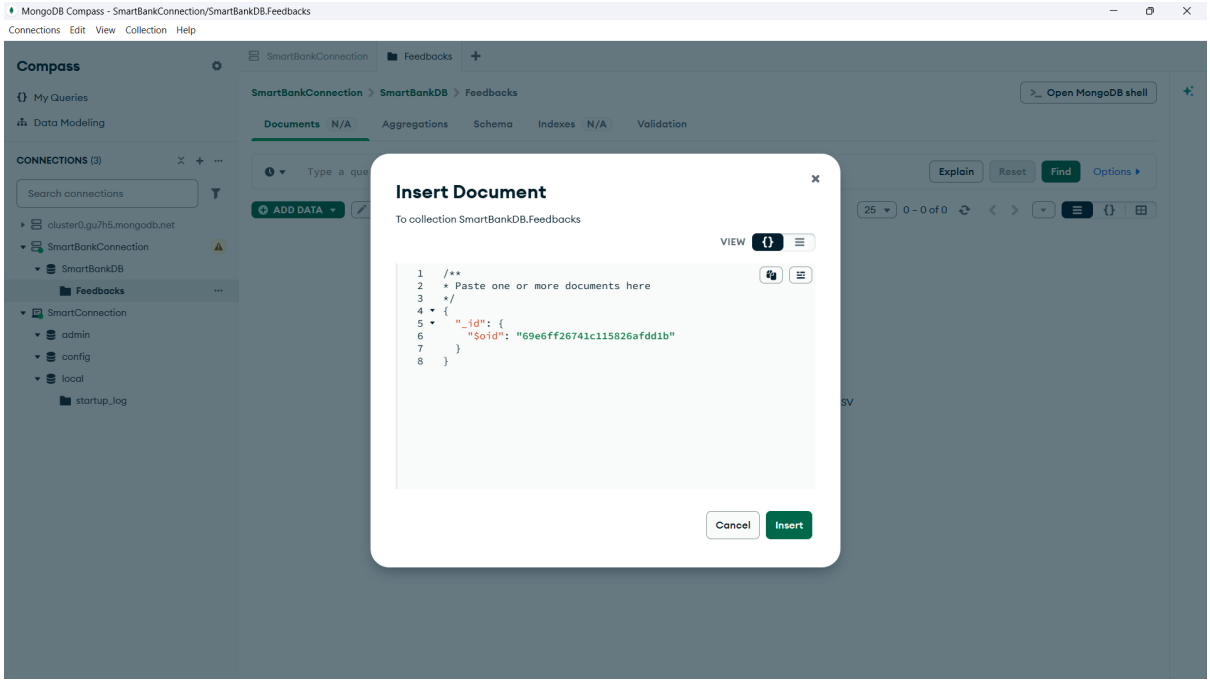
Create DB and do this



In settings find connection string



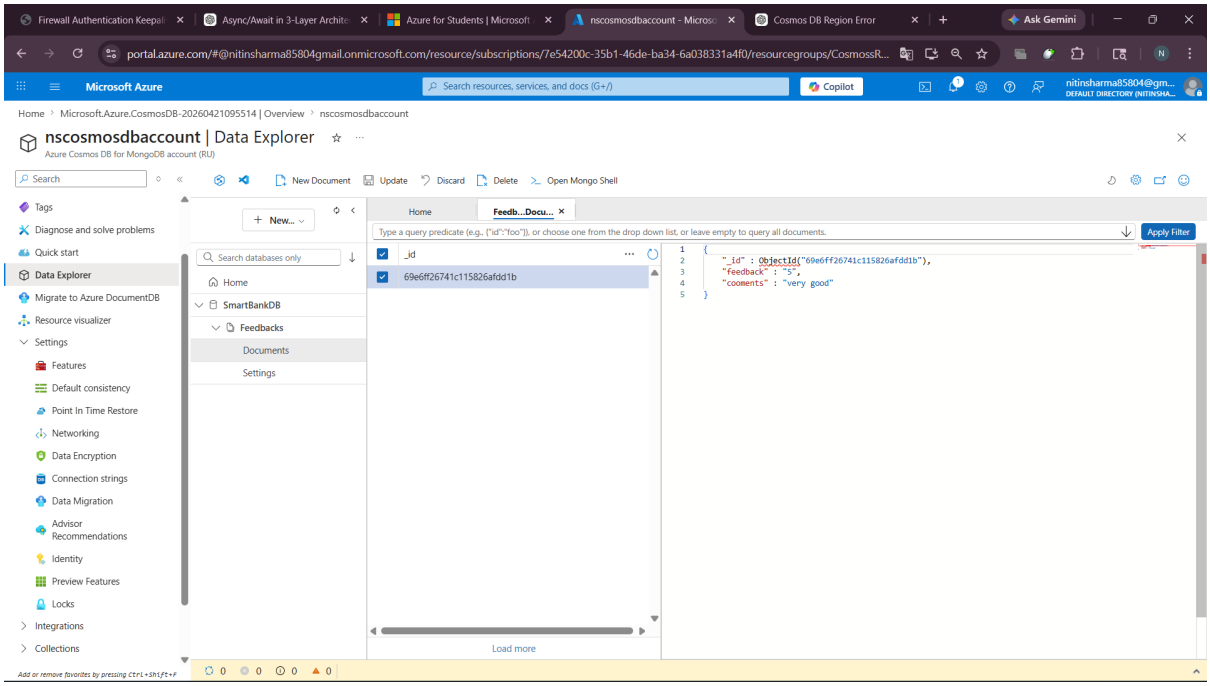
Copy this



Insert document

```
_id: ObjectId('69e6ff26741c115826afdd1b')
feedback : "5"
cooments : "very good"
```

Add data in atlas



The same data is reflected in CosmosDB
